

Active Learning for Computer Vision Curriculum

Project 4 Solution: Pool-based Active Learning – Part 2

Total Points Possible: 50

Problem 1 (50 points)

A sample output is shown below. The correct answer should resemble this output.

Note: this graph is from the paper by Liere and Tadepalli (discussed in the lecture material). This experiment was conducted on a different dataset with different training, unlabeled and test splits. Thus, the output on the VidTIMIT and MindReading datasets may not exactly match this output. This should just be used as a reference.
